

TÊTE À TÊTE

- **Position:** full sun or partial shade
 - **Soil:** well-drained soil
 - **Rate of growth:** fast-growing
- **Flowering period:** late February to April
 - **Hardiness:** fully hardy

Clusters of up to three deep golden-yellow flowers with slightly reflexed petals and deep yellow cups appear in March and April above the narrow, strap-shaped leaves. One of the most popular forms, this delightful dwarf narcissus makes a fabulous early spring display for a sunny window-box. Blue grape hyacinths and slow-growing variegated ivies help to extend the season of interest.
